History and Evolution of the Greek Alphabet

The Greek alphabet has a storied history that dates back to around the 8th century BCE. It evolved from earlier writing systems, particularly the Phoenician alphabet, which significantly influenced its development.

The Origins of the Greek Alphabet

The earliest form of the Greek alphabet emerged as Greeks adapted the Phoenician script to suit their linguistic needs. This adaptation included the addition of vowels, a feature that distinguished the Greek alphabet from its Semitic predecessors. Development Through the Ages

Over the centuries, the Greek alphabet underwent several transformations, leading to regional variants. By the 4th century BCE, the standardization of the alphabet occurred, and it became widely used throughout the Hellenistic world. The introduction of accents, breathings, and diacritical marks in the 2nd century BCE further refined its usage, allowing for greater clarity in written texts.
