Types of Polaris Pool Cleaners

Polaris offers a range of pool cleaners designed to meet the needs of various pool types and sizes. Understanding the different types of Polaris cleaners available can help you select the right model for your pool. The primary categories include pressure-side cleaners, suction-side cleaners, and robotic cleaners.

Pressure-Side Cleaners

Pressure-side Polaris cleaners operate using the pressure from your pool's plumbing system. They are ideal for larger pools and can handle a variety of debris types. These cleaners typically come with their own dedicated booster pump to enhance their cleaning performance. Some popular models include the Polaris 280 and the Polaris 3900 Sport.

Suction-Side Cleaners

Suction-side cleaners, like the Polaris 180, utilize the suction created by your pool's filter system to remove dirt and debris from the pool floor. They are generally more affordable and easier to maintain but may not be as powerful as pressure-side models. These cleaners are perfect for above-ground and smaller in-ground pools.

Robotic Cleaners

Robotic cleaners, such as the Polaris Alpha IQ+, are self-contained units that operate independently of your pool's filtration system. They are equipped with advanced navigation technology and can clean the pool floor, walls, and waterline. These cleaners are energy-efficient and often come with programmable features for tailored cleaning schedules.
