Thermostat Not Responding

If your thermostat is not responding, check the batteries if it is a battery-operated model. Replacing the batteries can often resolve the issue. If it is hardwired, ensure that the circuit breaker has not tripped and that power is reaching the unit.

Incorrect Temperature Reading

When the thermostat displays an incorrect temperature, it may be due to

placement. Ensure that it is placed away from direct sunlight, drafts, or heat sources that can affect its readings. Additionally, consider recalibrating the thermostat according to the manual's instructions.
